## Movie & Television Licensing

TerraServer has worked on many licensing projects including TV shows, commercials, major motion pictures, books, magazines, websites and games. These types of projects require separate licensing.

TerraServer has access to multiple satellite & aerial sources making us a one-stop shop for imagery and licensing. Our streamlined operations mean you get your licensing in time to meet your deadlines.

## About TerraServer

TerraServer was founded in 1997 in Raleigh, North Carolina with the simple purpose of finding a commercial market for satellite imagery and aerial photography.

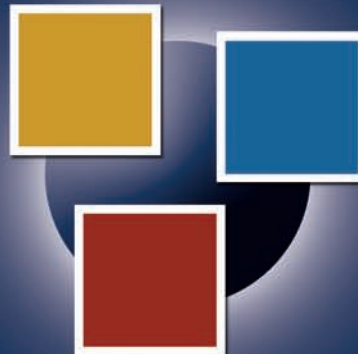

The company then forged a partnership with a Russian company, SOVINFORMSPUTNIK, with a cache of 2 meter, panchromatic satellite imagery (SPIN-2).

It was this relationship that yielded a series of high-resolution satellite views of Area 51, Groom Lake, Nellis Air Force Base, and the Nevada Proving Grounds.

In recent years, TerraServer has dramatically expanded its mapping selection by forging relationships with the leading imagery providers in the industry.

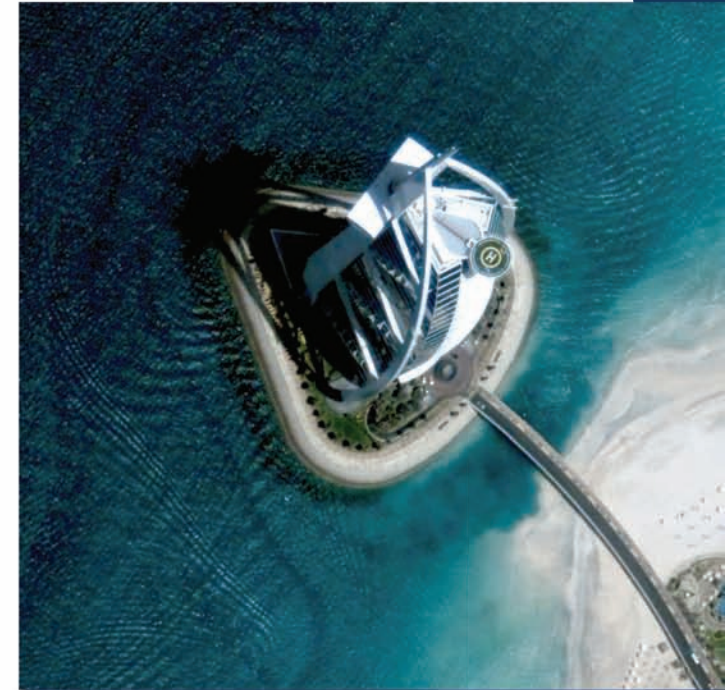

The result is the greatest selection and highest quality aerial photos and satellite images found anywhere.
